Background and numbers of IWT students in Europe

Ca. 2500 regular students of all levels are currently enlisted in the several European IWT educational institutions

The professional background of the boatmaster's aspirants varies-
The share of family successors is declining over the last decade

The share of career changers from the maritime sector to the IWT labour market is rather low due to the sailing time obligations

Contrary to other branches regularly education in order to obtain a certification on M.L. is not the usual way
